WEBSITE AUDIT -- Apex Forge

Prepared for: Anytime Heating & Air Conditioning Inc · anytimeheating.com · Audited 2026-10-07

Measured, not asserted. Every number below traces to a live measurement taken on the audit date.

If this audit doesn't deliver, you get a full refund -- no questions, no forms.

YOUR SCORE: 73/100 -- Grade C (Needs work)

Category	Score	Weight	What it means in one line
Speed	63/100	25	1.27s server answer; 13 blocking scripts slow the render.
Mobile	100/100	20	Viewport set, tap-to-call present.
SEO basics	56/100	20	No H1 tags at all, 594-char meta description, no LocalBusiness schema.
Contact path	67/100	15	Phone in header, chat widget -- but no dedicated quote form.
Reviews	75/100	10	Reviews exist everywhere, but 3.9* on 25 reviews drags the average.
Trust signals	83/100	10	Licensed/bonded/insured + NATE stated; testimonials on site.

In plain English: A 50-year-old company with a site that hides its best assets from Google: the homepage has no H1, a meta description four times too long, and no business schema -- so search engines have to guess what you are. Meanwhile the 3.9* rating on your most visible review profile is the first thing a comparing shopper sees. The bones (phone, hours, address, guarantees) are all there; the packaging is what's leaking.

THE 3 THINGS COSTING YOU THE MOST

- **[CRITICAL] Zero H1 tags on the homepage** -- measured 0 <h1> elements (2026-10-07). The H1 is the single strongest on-page signal telling Google "this page is about HVAC in Naperville."
- **[MAJOR] Meta description is 594 characters** -- measured (2026-10-07); Google shows ~155. Your search snippet is getting cut off mid-sentence.
- **[MAJOR] 3.9 *on 25 reviews (Birdeye)* -- your most prominent review profile sits below the 4.5** bar shoppers expect, while competitors show 4.7-5.0.

FULL FINDINGS (ranked by revenue impact)

1. No H1 tags on the homepage -- CRITICAL

- **Measured:** 0 <h1> elements in homepage HTML (2026-10-07).
- **Why it costs you:** The H1 tells search engines what the page is about. Without one, you're relying on weaker signals while competitors mark up theirs.
- **Fix:** Add one H1, e.g. "Heating & Air Conditioning in Naperville, IL".
- **Effort:** 10 minutes.

2. Meta description is 594 characters -- MAJOR

- **Measured:** `meta[name=description]` = 594 chars (2026-10-07). Bar: 120-160.
- **Why it costs you:** Google truncates at ~155 characters, so your snippet ends mid-sentence -- it looks unfinished next to competitors' crisp two-liners.
- **Fix:** Rewrite to ~150 chars: "Naperville's trusted HVAC company since 1973. AC & furnace repair, installation, maintenance. Licensed, bonded & insured. Call (630) 851-6696."
- **Effort:** 10 minutes.

3. No LocalBusiness schema -- MAJOR

- **Measured:** Zero JSON-LD schema blocks on the homepage (2026-10-07).
- **Why it costs you:** Schema is how Google builds rich results (hours, rating, phone right in search). Without it you're invisible in the formats that win clicks.
- **Fix:** Add HVACBusiness/LocalBusiness JSON-LD with name, address (10S264 Schoger Dr, Naperville IL 60564), phone, hours, geo.
- **Effort:** ~1 hour.

4. Slow server answer + 13 blocking scripts -- MAJOR

- **Measured:** 1,270ms time-to-first-byte; 13 synchronous scripts + 8 blocking stylesheets in homepage HTML (2026-10-07).
- **Why it costs you:** Over a second before anything can render, then scripts block what follows. Mobile callers feel it most.
- **Fix:** Server caching/CDN; defer or async non-critical scripts.
- **Effort:** Needs a developer, ~2-3 hours.

5. No dedicated quote form -- chat widget only -- MAJOR

- **Measured:** Homepage HTML contains a site-search form and a chat widget with contact fields, but no dedicated quote/request-service form (2026-10-07).
- **Why it costs you:** A chat widget demands a live conversation; a quote form lets a caller fire-and-forget at 11pm. You're missing the after-hours lead.
- **Fix:** Add a simple "Request Service" form (name, phone, issue) -- or make the chat widget's offline mode capture the same fields.
- **Effort:** ~1-2 hours.

6. Review profile needs attention -- MAJOR

- **Measured:** Birdeye: 3.9 / *25 reviews; BestProsInTown: 4.7* / 25; Yelp: 4.4* / 7 (public snippets, 2026-10-07). Testimonials are displayed on the site.
- **Why it costs you:** Shoppers compare stars before they compare companies. A 3.9 next to a competitor's 4.8 ends the comparison.
- **Fix:** Systematic review requests after every job (text the customer a direct link same-day); respond to every review, especially the critical ones.
- **Effort:** Process change, 10 min/job.

7. No explicit response-time promise -- MINOR

- **Measured:** "Emergency Services" is listed as a service line, but no "we respond within X" promise in homepage copy (2026-10-07).
- **Why it costs you:** Stating the promise converts the panicked midnight caller comparing two tabs.
- **Fix:** Add "Emergency? Call now -- [your real response commitment]." Only promise what you keep.
- **Effort:** 10 minutes.

What passed: Mobile setup is clean (viewport + tap-to-call (630) 851-6696). Title tag is textbook (55 chars, keyword-bearing). Sitemap + robots present, and both resolve. Name, address, and phone match across the site, directory listings, and review profiles. Hours (Mon-Fri 7AM-4PM) and full street address are in the footer. Licensed, bonded, insured + NATE certified -- stated. Guarantees stated. Testimonials on the site. Social profiles linked (Facebook, Instagram, Yelp). Zero broken links found. Page weight is light (~604KB measured). HTTPS with no mixed content.

Not measured: LCP, CLS, Total Blocking Time (need a browser render -- excluded, not estimated). Tap-target sizes, mobile-menu taps, chat-widget usability on a real phone render. Review recency and owner review responses (not verifiable from public snippets). Origin TLS certificate details (sandbox routes through a proxy; the site serves HTTPS with no mixed content). Google Business Profile listing itself (site links to Google Maps; the GBP record wasn't independently confirmed).

WHAT HAPPENS NEXT

Option 1 -- Fix it yourself. Everything above is yours to keep, with or without us. The ranked list is the roadmap.

Option 2 -- We fix the top 5 for you. Quoted per project in the $500-$1,500 range, on Brandon's tap before any number ships. Covers fixes 1-5 above, done-for-you.

Option 3 -- The Deep Audit ($297, your $75 credited). Competitor head-to-head against the other Naperville HVAC companies, full conversion teardown, and a 30-minute recorded walkthrough of these findings.

Site Care ($97/mo, cancel anytime): we watch your site 24/7 -- uptime, speed, broken links, certificate expiry -- and send you one plain-English health report a month.

Questions? Reply to this email -- it reaches Brandon directly.

Apex Forge · Refund guarantee: full refund if this audit doesn't deliver. Just say the word.
